

Due Diligence

RISC has extensive experience in carrying out due diligence for clients who are considering entry into upstream assets. A deep understanding of the oil and gas industry and an integrated multi-disciplinary approach means our clients can rely on our advice to make investment *decisions with confidence*.

We understand that the transactions being considered can range from tens of millions to hundreds of millions or billions of dollars and represent a material exposure for our clients.

Our highly-skilled teams work across all disciplines (geoscience, reservoir engineering, production engineering and commercial) to extract a clear understanding of the value, risks and opportunities, often from large and diffuse datasets and within tight timeframes. We promptly identify and quantify the critical issues and deliver detailed independent assessments and objective advice that our clients can rely on in their decision making.

Our projects vary widely in nature and location. We have executed many challenging assignments, including some or all of the stages of the hydrocarbon lifecycle – from early stage exploration, through appraisal, development, operations and abandonment.

In the last five years we have carried out more than 200 due diligence projects for over 100 clients worldwide.

Helping you to decrease risk and increase value

We present our advice in a transparent manner, allowing our clients to clearly see how we have reached our conclusions.

Our deliverables include:

- In-place resource estimates
- Production profiles and recoverable resources
- Development plans, costs and schedules
- Commercial assessment, including risk
- Exploration valuation, including prospect assessment and risk, exploration programs and transaction value
