

LNG

RISC has extensive experience in helping organisations meet the increasingly complex challenges confronting the LNG industry. Working closely with our clients throughout the LNG project lifecycle, we help them identify, analyse and resolve some of these challenges so they can make *decisions with confidence*.

We have an in-depth understanding of LNG projects gained from over 20 years of assessing projects in planning, development and production; providing advice on fiscal terms and environmental, social and economic impacts; and assistance with forming entry strategies into LNG opportunities across the globe. These are valuable insights for non-operator JV participants in particular.

Our in-depth and up-to-date knowledge on a significant number of LNG projects in the pre-planning, construction and operational phases means we draw directly on our experience and can give unique insights into the problems faced by LNG developments.

RISC has advised on all major LNG projects in Australia and South East Asia, as well as a number of projects globally.

We have assisted clients in transactions and ongoing support of their interests, including providing due diligence support to transactions totalling several billions of dollars.

Leaders in LNG project analysis

We have conducted integrated technical and commercial due diligence studies for many clients, enabling them to make decisions to enter into a number of LNG projects in Australia, Asia and Africa.

Our work includes the evaluation of the resource base, together with the development plans, associated costs and schedules, and economic analysis to create a view on the resulting range of outcomes that the project can be expected to achieve.
