

## Peer Reviews and Audits

At RISC we have been providing organisations with impartial, comprehensive and objective advice for over 20 years. Our peer review process provides independent analysis and opinion that reveals opportunities, creates value and enables our clients to make business *decisions with confidence*.

Internal peer reviews are often constrained by culture, politics, inter-personal relationships and structural biases that are frequently difficult to recognise. An independent peer review will challenge underlying assumptions or positions – it will identify issues, exposures and upside opportunities that may not have already been identified by individuals within the client team and so are not transparent to executive management or the Board.

Working closely with the client, our innovative specialist teams quickly determine the business needs and project objectives to provide a tailored review that is audited at each key stage. We apply an integrated approach combining strong commercial skills and expert technical knowledge with an in-depth understanding of the risks and limitations to ensure project success for our clients.

**Our reviews follow a transparent and auditable process and are based on integrated thinking with clearly defined inputs, metrics and deliverables**

- Exploration well proposals
- Subsurface modelling
- Project scheduling
- Project scope and capex
- HSE and organisational capability
- Pre-FEED project reviews

Our experts have completed assignments in more than 90 countries and have a reputation for providing quality advice across the entire oil and gas lifecycle.

- Reservoir Engineers
