

Reserves Certification

Reserves and resource estimations are fundamental to the funding and valuation of petroleum projects. RISC has been certifying reserves and carrying out audits to SPE PRMS, US SEC, Australian, Canadian and UK standards for over 20 years.

Our highly skilled E&P professionals have many years experience assisting oil and gas companies, investors, financial institutions and regulatory bodies in the preparation of independent reserves and resource reports, compliance processes and public disclosures.

We have a reputation for accuracy, transparency and independence and our rigorous and detailed reports have earned credibility with financial markets and reporting agencies. We operate on a no surprises basis and will engage with our client to ensure that there is a proper informed discussion.

We have a track record of thought leadership in the evaluation of unconventional petroleum. RISC Partner, Geoff Barker, served on the SPE Oil and Gas Reserves Committee, was involved with roll out of the PRMS, is a co-author of the SPE's 2011 Guidelines Chapter 8.5 Coal Seam Gas, and has presented courses on the requirements of reserves reporting to international best practice standards in London, Kuwait and Perth.

RISC has carried out independent reserves determinations and audits on conventional and unconventional petroleum (including clastic, carbonate and fractured basement reservoirs, tight gas, coal seam gas, basin centered gas, and shale oil and gas) in over fifty countries.

ASX and RISC oil and gas reserves and resources reporting 2013 national roadshow

RISC was commissioned by the ASX to assist with a nationwide education program for the petroleum community to explain new rules relating to reporting obligations on reserves and resources.

The new requirements provide a more robust and transparent regime for reserves and resources reporting.
