The PRMS – An Australian Perspective

Antony Corrie-Keilig IntPE (Aus) SPEC
The statements and opinions attributable to the presenter in this presentation are given in good faith and in the belief that such statements are neither false nor misleading. The opinions expressed in this presentation are personal opinions and should not be construed as legal or regulatory advice.

While they reflect what is believed to be informed opinion, they are not represented as being the opinions of the SPE/WPC/AAPG/SPEE/SEG/SPWLA/EAGE. Readers are urged to obtain independent advice on any matter relating to the interpretation of reserves definitions and their application.

In preparing this presentation RISC has considered and relied upon information in the public domain. Materials shown are publicly available and/or used by permission. This information has been considered in the light of authors knowledge and experience of the upstream oil and gas industry in Australia.

This presentation is the copyright of RISC and may not be reproduced, electronically or in hard copy, without the written permission of RISC.
We’ll focus on Gas, as it dominates the Australian hydrocarbons landscape and is the most visible with respect to challenges in resource estimation, disclosure and regulatory intervention.

Scene -1, Gas in Australia
- Key Thought of Presentation
- A Tale of two Countries
- Feast or Famine
- LNG Import Terminals
- Sovereign Risk & Gas Pricing
- The Attitude towards Unconventionals
- History Repeating Itself

Scene -2, The Australian Regulatory/Reporting Environment
- ASX and the PRMS
- Comparison with TSX and SEC Reporting
- ASX Observations on Reporting and Disclosure
- ACCC Reporting Framework

Scene -3, The Challenges in Application of the PRMS
- CSG Reserves Write-Downs
- Under Appraisal, a Common Theme
- PRMS 2018, does the Update address the issues?
The consistency of reserves & resource estimations and disclosure is important in the Australian East Coast, given the apparently different historical understandings of what 2P, 3P and 2C...

The accurate and timely disclosure of Reserves and Resources serves not only capital markets i.e. the ASX but Governments and industry for medium and long term infrastructure planning and ongoing viability of gas intensive industries

Where resource and/or reserves estimates suffer material downgrades and/or regulatory disclosure is obfuscated the market struggles to work efficiently potentially resulting in regulatory intervention

If we don’t get it right the regulators may intervene.

Australia, the World’s Largest Island and Largest LNG Exporter

Approximately $\frac{1}{3}$ of Australian LNG Exports sourced from unconventional resources such as CSG. Will US unconventionals lead to the US overtaking Qatar and Australia?

Major LNG Export Countries 2020 *Source RISC Analysis
However, it was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness – *Dickens, A Tale of Two Cities*

**The Domestic Gas Market Reality:**
- The West Coast is in a feast the East Coast is in a famine

**Unconventional and Conventional Onshore Gas Bans:**
- All states apart from Queensland and Northern Territory

**The Reality in the East Coast:**
- Domestic gas pricing surging above LNG import pricing
- Domestic gas shortages forecasted from 2020/22 onwards
- LNG import terminals are being proposed
- LNG import terminal pricing may commence at near export parity
- Federal Gas LNG Export trigger legislation for East Coast LNG exporters to protect domestic market
LNG Import Terminals on the East Coast

LNG imports are likely to be required into the east coast market from as early as 2020 to meet peak demand requirements potentially resulting in further upward pressure on gas pricing.

Based on a Floating Storage Regassification Unit (FSRU).

There are currently five (5) proposals to build LNG import terminals on the East Coast*.

Potentially exposes East Coast domestic market (industry) to LNG import Spot pricing rather than LNG export Netback pricing.

Not a long term solution from gas intensive industry perspective.

*Source EnergyQuest 2019
Australia enacted a federal law to potentially control East Coast LNG exports in reaction to surging domestic natural gas prices on the East Coast. Rising natural gas prices became a highly visible political issues in East Coast Australia as households and manufacturers complained of the higher costs.

So far LNG export trigger have not been enforced, but they exist, or to paraphrase President Teddy Roosevelt, the Federal Government is “speaking softly but carrying a big stick”.

Ironic that without an LNG export market CSG would have remained a minor resource based on the East Coast, and is now being pursued for domestic shortfalls. Potentially sizeable CSG resources may just not be commercial to develop at “low prices” the domestic market wants.

*Source: REUTERS COMMODITIES OCTOBER 24, 2018 / 4:57 PM / 7 MONTHS AGO
*1GJ ~ 0.95 MSCF
Under the terms of this agreement, the LNG producers committed to offer sufficient gas on reasonable terms to the domestic market.

In the short term, following the government’s intervention, domestic prices stabilised in the AUD$8–11/Mscf range and converged with East Coast LNG export parity prices.

The reality is that CSG is economic at higher gas price and other unconventionals are also likely to require high prices PLUS a successful technology under development process, that always has risk of failing.

In the long term, investment to mature Contingent and Prospective resources into reserves is critical for the domestic market.

The Attitude towards Unconventionals

Blanket Moratoria in the Southern States prevents development of gas proximal to existing gas infrastructure
As we noted before unconventional gas is unlikely to return domestic gas pricing to historical lows

Four states have undertaken scientific inquires to fracking:
- Risk to people and the environment is low and
- it can be undertaken safely, and
- No evidence it has contaminated aquifers to date

But....

In March 2017 Victoria became the first state in Australia to permanently ban all onshore unconventional and conventional gas exploration and development

A single CSG development in NSW “Narrabri” would support NSW gas needs and mean less reliance on importing gas
History Repeating Itself on Australia’s East Coast

Interestingly the East Coast of Australia finds itself in the same position the USA was in 10 years ago before the Shale Gale.

“North America emerges as a major importer of LNG” (EIA, IEEJ & others)

“Natural Gas prices will remain high in the US for the foreseeable future” (EIA)

“US is destined to become a key LNG import market” (BG)

Australia's east coast needs to urgently start importing LNG: EnergyQuest

When insanity makes sense: Australia's best option is LNG imports

Source: EIA
Have We Seen This Shale Gale Story Before?

Rising gas prices in the Eastern Australian gas market are driving speculation about LNG import requirements. The same speculation occurred in the US in the mid 2000’s. US managed to responded with unconventionals.
Key Takeaways from Scene-1

With the looming gas shortage, eyes are focused on whether booked Reserves and Contingent Resources are actually Reserves and Contingent Resources

There is severe gas supply shortfall looming in Eastern Australia

Potentially sizeable CSG resources may just not be commercial to develop at “low prices” the domestic market wants

Existing infrastructure proximal shale plays may provide additional supply, provided development strategies can quickly drive towards optimal cost effective drilling and completion strategies

In the long term, investment to mature Contingent and Prospective resources into reserves is critical for the domestic market
